

How To Perform Network Check For Office Installations

[Network Check for Office Installations](#): Office is available in different models like a DVD software and an Online Click to run versions.

Why a network connection is required for installing Office?

Both the versions of Office are widely available to download from your Microsoft Office account (www.office.com/myaccount)

The Online click to run version is always a recommend way to install Office for the reason it keeps getting update with the latest versions.

However a DVD software is necessary when it is required to install Office without Internet.

That is to say, it is require to have internet in order to activate Office. These Office click to run versions relate information can be found here.

The latest versions updates usually happens automatically. If the auto update fails to install, it is require to install using manual updates.

Manual update request will be notify on the top menu bar. This usually happens when you set the office updates to check manually.

Here is the list of cases for Network Check for Office Installations

In order to check the network consistency for an [office product installation](#), on other hand, following cases are good to follow.

1. It is important to check whether the Windows updates are running smoother.
