

WATER TREATMENT COMPANIES

ABOUT US

EPSCO started out in 1995 from very humble beginning driven by passion a clear vision. dedication and hard work by all the staff that joined us having a strong belief in quality and value for money. The company was focused on two areas — water and air that were permanently linked to quality, environment, health and safety. Over the years the company has grown into an international group in twelve countries on three continents with 18 branches specializing in services with quality, environment and safety issues at the forefront of the business. EPSCO established a multi national family style of business where everyone gives their best and more and not just working as "Employees", the customer always comes first along with the magic smiles that can only come from the staff having the culture of family spirit.

WATER TREATMENT COMPANIES

In nature, water is available in various forms. In most cases, the local municipality treats the available water and supplies it to the community. The water being supplied to the community is regulated by WHO and local standards for domestic applications, however, there is a possibility that the water may become contaminated by impurities such as sand, dust, iron, and other suspended particles while traveling through the supply pipelines. Water in home storage tanks can also become contaminated by impurities. Microbial contamination leading to serious health issues can result if proper cleaning and storage conditions are not maintained.
