AFFORDABLE DENTAL CROWNS NEAR ME

A crown is a form of cap that covers the whole original tooth. It's made of porcelain or ceramic with quality, long-lasting materials and is built to last. Crowns can be used to restore a tooth that has been cracked, decaying, or damaged, or just to improve the appearance of a tooth. When fillings fail, our dentists will use a crown to cover (or "cap") your injured tooth. Stainless steel, ceramic, acrylic, gold, and metal alloys are among the materials used in dental crowns. Crowns are permanent restorations that are cemented onto natural teeth or dental implants and can only be removed by a dentist. The tooth surface must be prepared before a crown can be fitted. It will be fitted with a crown.
