# ROUTEFUSION

Connecting You to a World of  
Payment Possibilities

# ABOUT US

We are our own customers. We began building a neobank in 2016, and our customers immediately asked to send money across borders. But there was no good way to do it - dozens of providers, ancient APIs, hundreds of currencies, and no way to connect them all. So Routefusion was born with the vision of a developer-first product that provided a single API to make cross-border payments and international expansion more accessible.

# Embedded Finance Platforms

RouteFusion's Embedded Finance Platforms seamlessly integrate financial services into your business operations. By leveraging innovative technology, they help businesses deliver secure, efficient, and customizable financial solutions to meet global demands. Whether you aim to streamline payments or enhance customer experiences, RouteFusion's embedded finance tools ensure scalability and operational ease for long-term growth.

# Create Virtual Bank Accounts

With RouteFusion, businesses can easily create virtual bank accounts to simplify global transactions and reduce currency conversion costs. These multi-currency accounts provide flexibility and control, enabling efficient international payments and better cash flow management. By offering secure transfers and enhanced financial visibility, RouteFusion helps businesses overcome traditional barriers and operate seamlessly across borders.

# Cross Border Payouts API

RouteFusion's Cross-Border Payouts API delivers a streamlined solution for managing global transactions. Businesses can automate payouts to vendors, partners, and employees worldwide, ensuring fast, secure, and cost-effective transfers. Designed for scalability and integration, RouteFusion's API connects seamlessly with business systems, simplifying international payment processes while improving efficiency and reducing operational complexities.
